Frequently Asked Questions

Who is the best DJ in EDM?

Few could argue that the title of 'best DJ in EDM' is a highly coveted one. With so many talented performers vying for this accolade, it can be difficult to choose just one! Many names have been put forward as potential contenders, but it may ultimately come down to personal preference and individual style. Ultimately, there is no single answer to this question; however, some DJs are widely considered to be amongst the best in the genre. For example, Martin Garrix has earned recognition for his innovative soundscapes and captivating live performances. Similarly, David Guetta has won fans across the globe with his energetic club anthems and unique production techniques. Other leading names include Tiësto, Avicii and Skrillex – all of whom have made major contributions to the world of EDM and continue to push boundaries with their music.

Who invented EDM?

Music has been a part of humanity since the beginning of time, and EDM (electronic dance music) is no exception. While it is difficult to pinpoint who invented EDM exactly, its roots can be traced back to 1970s disco and funk music. At this point in time, DJs began experimenting with synthesizers and other electronic instruments to create unique sounds that would eventually come to define the genre.

Is techno the same as electronic dance music?

No, techno and electronic dance music are not the same. Techno is a genre of electronic music that emerged in Detroit in the late 1980s. It has its own unique sound and style, characterized by repetitive beats and minimalistic structures. Electronic dance music (EDM), on the other hand, is a broad term encompassing various genres such as house, trance, drum & bass, dubstep, and more. While all EDM genres share certain common elements like repetitive beats and melodies, each one has its own distinct characteristics that set it apart from others. So even though there may be some overlap between techno and EDM, they are ultimately two separate entities.
